Gujarati

PROFILE

Hello! I'm Mohammed Faisal, a passionate frontend developer. I make pixel-perfect websites and web applications. My journey into web development began with a fascination for creating interactive user interfaces that seamlessly blend functionality with aesthetics.

Seeking role in web development.

PROJECTS

Weather App:

- The weather app provides users with current weather information and forecasts based on their location or a specified city.

Current Weather: Displays temperature, humidity, wind speed, and weather conditions.

- Forecast:** Shows a short-term or extended weather forecast (e.g., hourly or daily).

- Location Input:** Allows users to enter a city for weather information

- Technology Stack:**

- HTML:** To structure the app's layout

CSS: To style the app and make it visually appealing.

- JavaScript:** To handle logic, API requests, and dynamic updates.

Basic Workflow

- User Input:** The user inputs a city name or uses their location.

- API Request:** The app sends a request to the weather API with the city or location data.

Data Processing: The app processes the API response, extracting relevant weather information.

- Display:** The app updates the UI to show the current weather and forecast.

- Live Demo:** <https://dynamic-weather-app-by-faisal.netlify.app/>

Todo-List:

- The To-Do List app helps users organize their tasks by allowing them to add new tasks, mark tasks as completed, and remove tasks from the list.

Core Features:

- Add Task:** Users can input a new task and add it to the list.

- Display Tasks:** Shows the list of tasks with options to mark them as complete or remove them.

- Mark as Complete:** Users can mark tasks as completed, often using a checkbox.

- Remove Task:** Users can delete tasks from the list

Technology Stack:

- HTML:** For structuring the app's layout.

CSS: For styling the app and making it visually appealing.

- JavaScript:** For handling the app's logic, including task addition, completion, and removal

Myntra Ui Clone:

The goal is to create a static version of Myntra's homepage, replicating the general appearance and layout Using HTML and CSS.
